

## The marten defence sales support

General information and benefits

### WHY DO THEY BITE ANYWAY?

- 1. Hide-out** The engine compartment is a popular hiding place for martens. Contrary to popular opinion, however, the heat in the engine compartment seems to be irrelevant.
- 2. Exploration** Martens explore their environment using their teeth, chewing cables, pipes and seals.
- 3. Territorial fights** If a marten detects a rival's scent mark, it reacts extremely aggressively. Vehicle owners are therefore particularly affected by this as they often park in different "marten territories".

### WHEN ULTRASOUND, WHEN HIGH VOLTAGE?

#### Ultrasound:

Martens perceive ultrasound tones as unpleasant and will avoid them.

#### The benefits of K&K-Opel devices:

- Sinus ultrasound waves are inaudible to humans
- Pulsating avoids the habituation effect
- The warning calls of the other creatures are therefore particularly effective as a defence
- 360° dome speaker for all-round sound protection
- Loudspeaker openings are not used, as they need to be guaranteed to be 100% waterproof to allow deep installation and to withstand engine washing.

#### High voltage: "Those who cannot hear must feel!"

High voltage is recommended in addition for particularly aggressive animals (territorial behaviour).

#### The benefits of K&K-Opel devices:

- Suitable for all generations of engine
- Soft start – slow charging at a low current level
- Is not a significant consumer of on-board power
- High level of safety because of the instant discharge bonnet switch
- Battery monitor protects against any residual discharge of the car battery
- Connection to vehicle terminal 15 is not required; the simple connection to the battery means the device starts automatically

# The marten defence sales support

The products and their areas of use

## PRE-TREATMENT

### Removing territorial markings

To avoid contamination, we recommend a thorough engine washing before installing your marten defence solution.

## WHICH PRODUCT FOR WHICH APPLICATION?

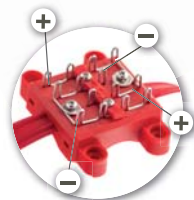

### Basic marten defence (Opel part no. 39201670)

- Ultrasound marten repellent device
- Absolute watertightness allows it to be built in deep and creates a soundproof rug

### Premium marten defence (Opel part no. 39201673)

- Ultrasound high-voltage device with new brush technology
- Dual-pole high-voltage strands also penetrate the marten's insulating fur
- More defence surface and can be installed in any environment

### Mobile marten defence (Opel part no. 39201672)

- Ultrasound marten repellent device
- Self-sufficient operation due to its own power supply (AA batteries) ·
- Can also be used outside the engine compartment (e.g. in a carport)
- Also suitable for vehicles with a limited ownership period (e.g. in a hire car, leasing or demonstration car, etc.)
